

American Red Cross Steps for Choking Emergencies

Telephone Number _____

Check

- ✓ Check the scene for safety
- ✓ Check the victim for consciousness, breathing and signs of circulation

Call

- ✓ Dial 9-1-1 or local emergency number
- ✓ If alone and victim is under 8 years old, give 1 minute of care, then call 9-1-1

Care

- ✓ Care for conditions you find

INFANTS
(Birth to 1 year)
If conscious and choking...

Give Shock Blows

Then give 5 chest thrusts

Repeat back blows and chest thrusts until object comes out or victim becomes unconscious.

If infant becomes unconscious...

Look for and remove any foreign object from mouth

Give 1 rescue breath, if air does NOT go in...

Give 5 chest compressions

If air does NOT go in, repeat steps 1, 2 and 3. If air DOES go in, give another breath then check for signs of circulation.

CHILDREN
(1 to 8 years)
If conscious and choking...

Give abdominal thrusts until object comes out or victim becomes unconscious

If child becomes unconscious...

Look for and remove any foreign object from mouth

Give 1 rescue breath, if air does NOT go in...

Give 5 chest compressions

If air does NOT go in, repeat steps 1, 2 and 3. If air DOES go in, give another breath, then check for signs of circulation.

ADULTS
If conscious and choking...

Give abdominal thrusts until object comes out or victim becomes unconscious

If adult becomes unconscious...

Look for and remove any foreign object from mouth

Give 2 rescue breaths, if air does NOT go in...

Give 5 chest compressions

If air does NOT go in, repeat steps 1, 2 and 3. If air DOES go in, check for signs of circulation.

The Skills To Save A Life...

American Red Cross lifesaving training can give you the skills and confidence to safely act in an emergency.

Don't Delay—Get Trained!

First aid, CPR and automated external defibrillation (AED) training can mean the difference between life and death. For more information, contact your local American Red Cross chapter or visit www.redcross.org.

This poster should not be used as a substitute for training. If you do not have a breathing barrier or disposable gloves available, do not delay care.
